WELCOME TO COMPUTING AND INFORMATION SYSTEMS GROUP

Using VPN With Microsoft Windows 10 (Private)

1. Click Start, then click Settings (a small gear icon on the left). This will bring the "Windows Settings" panel to the front. Choose the "Network & Internet" icon.

2. On the left, click the VPN.

3. On the right, choose the "Add a VPN connection", and set up a new connection as follows:

VPN provider	Windows (built-in)
Connection name	Up to you (e.g. PA VPN)
Server name or address	vapor.pa.ucla.edu
VPN type	L2TP/Ipsec with pre-shared key
Type of sign-in info	User name and password
User name (optional)	Your login name, or leave blank for later
Password (optional)	Your password, or leave blank for later
Remember my sign-in info	Checked if this is your computer, unchecked otherwise

After filling this in, click Save.

4. On the right, choose "Change adapter options". The "Network Connections" will come up.

5. Find the adapter icon named as above (in this example, PA VPN), and right-click it, then choose Properties. This will bring the Properties panel.

6. Click the Security tab and set option as follows:

Type of VPN: Advanced settings	User preshared key for authentication, Key: PAvpn01
Data encryption	Optional encryption
Authentication	Allow these protocols
Unencrypted password (PAP)	Check

7. Click the Networking tab, and uncheck all the items, except the "Internet Protocol Version 4 (TCP/IPv4)".

8. Click the OK button, and close the "Network Connections" panel.

9. On the right, click the connection you just created (in this example, PA VPN), and click the Connect button. Use your P&A login to connect. In case of success, there will be a word "connected" right by the connection name.
